

Ceiling unit 'FlexoTronic', electric

In the past, wall, floor and ceiling systems needed a fixed position and could rarely be combined. Every system was created for a specific area of movement and variation options were limited. The 'FlexoTronic' is the latest generation of electric ceiling units introduced by Schelde Sports to the market. The individually operated ceiling units form the basis of the 'FlexoTronic' system. Every unit is equipped with a powerful and silent electric motor which optimises ease of use. In addition, the system incorporates many security devices.

The combination of various basic elements of the system, such as rope ladders, climbing ropes, ring systems, swings, climbing nets, etc. ensures a wide range of user options. The combination with 'fixed' systems such as the hoistable wall bar (see picture below) or the wall bars with counterweights, mean that combinations are sheer endless.

The UltraGym® uprights expand the combination options even further.

Technical specifications

Motor:	Silent motor linked to hoisting drum ø 78 mm.
Braking section:	Dual safety: both motor brake and cam disc with lock settings and locking pin on hoisting drum.
Hoisting belts:	2 nylon hoisting belts per drum. Breaking strength 2000 kg/belt. Carabiners on bottom for securing items.
Safety:	Pre-set for predetermined load with signal for overloading. Key switch on the control panel. The unit has 2 speeds. The fast mode where the straps run fast when there is no load attached. The slower mode where the straps run slower when a load is attached. The latter offers more control/safety.
Operation:	PLC operated control unit. Control panel with buttons. Every unit can be operated separately, or multiple units can be operated together (choice of user).

Control unit:

1280580	2 units
1280570	4 units
1280585	6 units
1280575	8 units
