

Climbing rope installation

The climbing rope installations from Schelde Sports offer a wide range of physical development options for children. Not only climbing ropes, but also rope ladders and knotted ropes can all be attached to the rail. These are hung on smooth running rolling carriages. An ingenious locking system means the ropes can be secured wherever you like. Depending on the space you have in your hall, you can choose between a straight rail or a curved rail.

- Low maintenance, closed section profile
- Variety of plaited and twisted ropes
- Ceiling attachment above the position of each rope
- Centre-to-centre distance of 70 to 100 cm between ropes

Climbing rope cap and locking kit

Curved rail

Straight rail

Technical data:

Rail:	Robust steel rail in dust-free design (i.e. box-section) so carriages run smoothly and the return rope does not hang in the way. Equipped with nylon start and end pulleys, bumpers and safety brackets for each rope.
Locking:	Each rope can be locked.
Rolling carriages:	The front, interim and rear carriages are fitted with 4 quality steel wheels which are supported by bearings, to which the ropes/rope ladders/ring sets are secured.
Ropes:	Made of plaited or twisted hemp, finished with leather socks. The ropes are equipped with a steel top-cap with a swing axle that is locked to the climbing rope carriage.
Rope distance:	The centre-to-centre distance between the ropes is 70 to 100 cm, depending on the customer's requirements.
Length of ropes:	Depends on hall height.
Storage bracket:	Supplied as standard and mounted on the wall for purposes of storing ropes and ladders, including cleat for storing the return rope.
Recessed unit:	The storage bracket can be mounted in an obstacle-free recessed unit with flat door. (optional)
Valid standard:	NEN 3345

With the climbing rope installation from Schelde Sports, you have a multifunctional and safe climbing system

- If all of the ropes are pulled out, each one hangs under a fixing point from the rail to the ceiling. This benefits safety and the durability of the rail itself.
- If you pull out only a few ropes, you can use our ingenious locking system to secure the ropes so the distance between them is maintained while climbing.
- The ropes are equipped with wear-free running carriages from which climbing ropes, knotted ropes and rope ladders can be hung; this offers endless possibilities.

The Schelde Sports standard locking system in the rail ensures that the ropes can be locked in any position. As a result, you can pull out only the number of ropes you require and secure them. During climbing, the ropes will not move, thus maintaining a safe climbing environment.

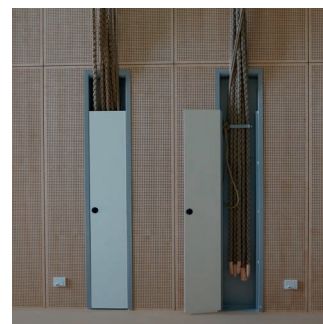

Standard locking system

The rope climbing installation can be expanded to include rope ladders that are attached to the same rail. If you install floor fixings, you can also tension the rope ladder to the floor. This allows you to use various climbing options next to one another.

The climbing ropes can easily be stored behind a special storage bracket. If you wish to keep the wall obstacle-free, you can install a wall-recess. The storage bracket is then housed in the recess that can be closed with a flat door.

Storage in wall recess

Item 1277004	climbing rope rail straight for 6 ropes
Item 1277104	climbing rope rail curved
Item 1277900	front carriage for climbing rope
Item 1277910	interim carriage for climbing rope
Item 1277920	rear carriage for climbing rope
Item 1229512	climbing rope plaited for hall height 550 cm
Item 1230550	rope ladder for hall height 550 cm
